

# No. 10 tariff

Secure  
Mobile  
Productive

What our customers say about us...

We could tell you all about the cost-saving, productivity and security benefits of mobilising your workforce with tablets. But we think it's better if you hear it straight from your peers. So, here are some recent thoughts from a handful of our Public and Third Sector customers...

"O<sub>2</sub> worked with us to develop a plan to replace our whole estate with brand new devices and a mobile data project which spanned across three police forces. It was important to us that we could clearly articulate savings while keeping the whole project manageable, and that's why the No. 10 Tariff was so appealing. It allowed us to considerably reduce costs, while equipping our front line and back office staff with the latest 4G technology."

Ian Bell  
Head of ICT BCH, Cambridgeshire Constabulary

"We spoke to O<sub>2</sub> as part of a project to roll out mobile working to our organisation and they explained the benefits of the No. 10 Tariff to us. We realised we could take advantage of the great value and ease of procurement of the No. 10 Tariff, as well as the numerous other benefits this would bring to Barnardo's. The roll-out of tablets and smartphones has increased the mobility of our workforce, been delivered at a lower cost and increased job satisfaction amongst our staff."

Martin Duffy  
IT Services Manager, Barnardo's

"O<sub>2</sub> worked with us to develop an affordable plan to supply iPads to our employees, and they've made a real difference to how we work smarter. Crucially, we now have access to customer detail such as outstanding rents so we can follow up on the move. This enables our housing support workers to update back end systems away from the office saving both time and money."

Martin Crouch  
IT Service Manager, Amicus Horizon

"The way O<sub>2</sub> used their experience and expertise to support the development and roll-out of a leading-edge tablet solution was very impressive. It allowed us to mobilise senior staff and take advantage of the great opportunity to transform the way our people work. To have the security of the O<sub>2</sub> network behind this technology is also hugely reassuring."

Patrick Welsh Murray  
Head of ICT, East Renfrewshire Council
